

# Idesco DESCoder

## Mifare DESFire Configuration Tool

Idesco DESCoder is a powerful software tool for programming both access and configuration cards compatible with Idesco's Mifare DESFire products. Since all of Idesco's Mifare DESFire products are now downwards-compatible with Mifare technologies and readers, DESCoder can make it easy to upgrade certain Mifare installations. Changing hardware is no longer a necessity with some of our newest readers.

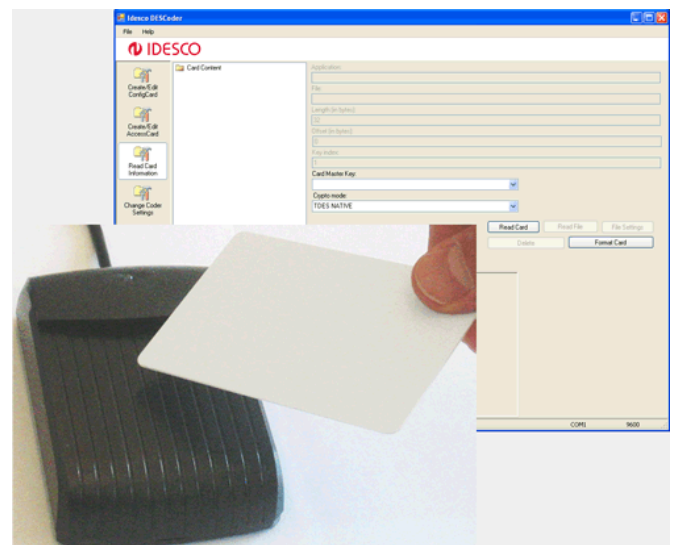

For this reason, DESCoder Software opens up a whole new realm of possibilities. In addition to programming Mifare DESfire Cards for a wide variety of uses, conditions, levels and types of security, the program can also be a powerful tool for managing readers.

Perhaps you need to configure a large number of Idesco Access 8 CD DESFire readers? Idesco® DESCoder software makes your job easier by enabling you to quickly program a configuration card for the job. Perhaps you need to configure some of those Access 8 CD readers for Access 7 C functionality? Again, DESCoder can create the configuration card you require for the job.

Additionally, with Idesco DESCoder Software, the full power of Mifare technology embedded in a DESfire smart card is made accessible for you to customize and meet whatever needs your operation demands. What if some employees in your operation require access to a number of different buildings or areas with widely different security protocols? Idesco® DESCoder Software enables you to consolidate their privileges on a single Mifare DESfire card by using Mifare's ability to host numerous applications in a single card. Protocols can be simplified for multi-credentialed personnel without sacrificing security.

Need a convenient application for reading Mifare DESFire contents? Again, Idesco® DESCoder does the job! And these are only a few examples of how Idesco® DESCoder Software can make managing your Smart Card-dependent systems easier, faster and more secure.

The DESCoder package includes an easy-to-use software application and a desktop reader/writer unit.

### Specifications

Minimum System Requirements	Intel Pentium 100 MHz 64 MB RAM CD-ROM drive MS Windows XP/Vista/7
Interface:	USB
Supported Transponders	Mifare DESFire (13,56 MHz)
Package Contains	Idesco DESCoder Application User Manual Installation Instructions Desktop reader/writer (for programming cards)
